Announcement of Workshop on “Increasing Investments for AMR R&D”

The Global AMR R&D Hub is pleased to announce a one-day workshop on “Increasing Investments for AMR R&D”, which will take place on Tuesday May 28 2019 in Geneva, Switzerland. The event will gather representatives from governments, funders, industry, investors and other stakeholders interested in the field of antimicrobial resistance.

Antimicrobial resistance (AMR) represents an urgent major global health threat. Currently, there is an insufficient number of treatments and tools in the AMR research and development (R&D) pipeline to tackle this issue. Building on ongoing initiatives, increasing investments across the One Health spectrum is required. In particular, more effort is needed in the animal and plant fields as well as applicability in low- and middle-income countries (LMIC).

This workshop aims to discuss investments and financing mechanisms for AMR R&D and provide recommendations for funders and investors on how to address the vital issue of increasing investments in AMR R&D in a One Health context that also considers applicability in LMIC.

Programme:
Will be published soon.

Registration:
Registration is free of charge and will be open soon.

Travel Assistance:
There is a limited number of funds to assist applicants from LMIC who would not otherwise be able to attend the workshop. This usually includes transportation and lodging. You will be asked to request travel assistance in the online registration by 1 May 2019. Applicants are responsible for their own travel documents, including visa applications. The secretariat provides supporting letters for visa applications upon request.

Location:
The workshop will be held in Geneva, Switzerland. The final meeting location will be available on the agenda closer to the meeting time.
